

! a face detection model does not generate output in the form of this nice green rectangular bounding box as you see

🧐 its output is actually a numeric representation of this green box (recall we can represent all those amazing stuff in numbers?)

😊 based on the number representation of the bounding box,
we programme the computer to help us draw out this box

OUTPUT

! a face detection model does not generate output in the form of this nice green rectangular bounding box as you see

👉 its output is actually a numeric representation of this green box (recall we can represent all those amazing stuff in numbers?)

😊 based on the number representation of the bounding box, we programme the computer to help us draw out this box
