

An example

Task context:

Use numbers to represent whether the image is a dog or cat

The number representation I come up with:

[0, 1]

The protocol I'm going to pass around:

hello this is a protocol created by covfefe for the dog-or-cat numeric representation and I can bullshit whatever I want here as long as I explain how to interpret [0, 1] somewhere are you with me

The first number (with index 0) in this array represents the probability of this image being a dog image

The second number (with index 1) in the array represents the probability of this image being a cat image

now try this
